

Pfynwald Research Platform

Terms of Use

Preamble

The following Terms of Use (ToU) aim to regulate the use of and the collaboration on the Pfynwald Research Platform. The **Pfynwald Core Group** (PCG) supervises the Pfynwald Research Platform and issues these ToU. For the members of the PCG, please see Table 1 below.

Definitions

- *User*: everybody who is performing measurements on the Pfynwald Research Platform according to clause 4 below,
- *External Collaboration Partner (hereinafter “Collaboration Partner”)*: a natural person who is not a member of the PCG, who represents a research institution and is responsible for the supervision of a User.

The present ToU regulates the use of and the collaboration on the Pfynwald Research Platform

- to secure the integrity of the forest ecosystem and its single trees;
- to consider the reduced forest- and tree-health due to drought;
- to minimize the impact from measurements and sampling;
- to prevent conflicting interests and conflicting measurements;
- to manage and secure the data from members of the PCG, Collaboration Partners and individual Users;
- to foster innovative science with a unique research platform.

1. ***Compliance with the following requirements is mandatory for all Users of the Pfynwald Research Platform***
2. All Users protect the integrity of the forest ecosystem and its infrastructure and respect Pfynwald as common research platform inside the nature reserve Pfyn-Finges.
3. No extensive (e.g., tree coring, girdling) or repeated (e.g., weekly) destructive sampling is allowed.
4. For any planned measurement campaign or installation (including long-term), Users must contact the PCG at least one month prior to the expected installation. The PCG discusses the planned measurements and decides on their approval/disapproval. The contact address for the PCG is pfynplatform@wsl.ch.

5. Before the start of the anticipated study, Users have to enter expected metadata in the metadata table (download from www.wsl.ch/Pfynwald) and return them to the PCG.
6. After completion of the measurement campaigns, Users must enter the collected data and metadata at www.envidat.ch. Support in this process and for data analysis is provided by the PCG and the appropriate individuals (see Tables 1 and 2)
7. Users are obliged to immediately report broken research infrastructure, objects causing risks (e.g., hanging trees, loose power cables or sensors) or any other incident to the PCG (send photo to pfynplatform@wsl.ch).
8. Users must take waste generated during the stay in the Pfynwald back home.
9. After completion of the measurements, Users must remove all installed equipment from the Pfynwald Research Platform.
10. The measurements for the VPDrought project (www.wsl.ch/vpdrought), which will be carried out at the Pfynwald Research Platform from 2023 to 2028, have priority. Collaboration and data exchange between VPDrought and other projects is encouraged.
11. Users are responsible for any damage they cause to infrastructure or other measurements.
12. Users must comply with the attached Safety Concept of the Pfynwald Research Platform.

Contact

Detailed information on the Pfynwald Research Platform can be found at www.wsl.ch/pfynwald.

Email contact of PCG: pfynplatform@wsl.ch

Signatures

On behalf of the PCG

Name: Dr. Marcus Schaub

Table 1. Members of the Pfywald Core Group (PCG)

The members of the Pfywald Core Group (PCG) are the following representatives of WSL, EPFL and ETHZ:

- Marcus Schaub, head of PCG and scientific co-coordinator
- Jonas Gisler, technical coordinator
- Charlotte Grossiord, scientific co-coordinator (EPFL)
- Stefan Hunziker, meteorological analyses
- Christian Hug, technical support
- Volodymyr Trotsiuk, data base manager
- Arthur Gessler, scientific advisor
- Andreas Rigling, scientific advisor (ETHZ)

Table 2. List of system parameters and responsible scientific experts (data owners) at WSL:

- Stefan Hunziker, meteorological parameters
- Katrin Meusburger, forest soils and biogeochemistry
- Petra D’Odorico, multispectral and thermal imaging
- Richard Peters, xylem sapflow
- Roman Zweifel, point dendrometers
